2017 Lima Summer School in Economics

February 20th to 28th, 2017
The 2017 Lima Summer School in Economics is organized by Lima School of Economics (LimaSE) in collaboration with Vancouver School of Economics (VSE). It offers advanced level courses that cover state-of-the-art topics in the field of economics.

The courses are taught by professors from VSE as well as by members of LimaSE who are leading researchers in their areas of specialization.

The 2017 Lima Summer School in Economics is a great opportunity for postgraduate and advanced undergraduate students in Peru, Latin America and all around the globe, to interact with and learn from a world-class faculty. It also offers recent graduates and practitioners in economics the opportunity to develop and strengthen their areas of expertise.
LimaSE is an initiative of the Department of Economics at Universidad de Piura. At LimaSE we promote graduate level programs that enhance advanced learning and research, as well as strengthen the expertise of students, academics and practitioners in the field of Economics.

In association with Vancouver School of Economics, one of the top departments of economics in the world, we are pleased to organize the Lima Summer School. Our 2017 Summer School offers prospective participants from Peru, Latin America and all around the globe, a world-class academic experience, a unique collaborative environment with top researchers, and the opportunity to experience one of the most vibrant and dynamic cities on the South American Pacific Coast.

We look forward to meeting you in Lima for our 2017 Summer School!

Marcos Agurto
Director Lima School of Economics

The Vancouver School of Economics (VSE) is pleased to be once again a partner of Lima School of Economics in the upcoming 2017 Lima Summer School. The VSE has a long tradition of international collaborations in research and teaching. The Summer School provides a unique opportunity of enhancing collaborations between VSE faculty members and students and scholars from Peru and the rest of South America.

In the Summer of 2017, two VSE faculty members will teach mini courses in various fields of economics as part of the Lima Summer School. We are very excited to be part of what will be a great opportunity for students and young professional economists to learn about of state-of-the-art research in economics, enhance their career prospects, and prepare them for further studies.

Hoping that you will join us in Lima next year!

Weak instruments and related issues have been an important area of research in Econometrics during the last 20 years. In this course, we will survey the main findings of this literature. We will discuss the consequences of having weak instruments and how one can detect their presence. More importantly, we will explore modern techniques designed to produce reliable results regardless of whether instruments are weak or strong.

Additionally, we will discuss the related issue of weak identification in nonlinear econometric models estimated by GMM, Maximum Likelihood and related methods, which are routinely used in empirical Micro and Macro economics, Industrial Organization, and other applied fields.

Dr. Marmer received his undergraduate and Master’s degrees in Economics from the Hebrew University of Jerusalem, Israel. He worked at the Bank of Israel and taught as an instructor at the Hebrew University before continuing to PhD studies at Yale University in New Haven, USA. He received his PhD in Economics from Yale in 2005, came to UBC as an Assistant Professor of Economics in the same year, and was later promoted to an Associate Professor in 2012. His main area of research is econometrics, where he has been working on the issues of misspecification, identification, statistical inference for auctions, and nonlinear and non-stationary time series. Since 2005, he published eleven scholarly papers including seven papers in Journal of Econometrics, which is a leading scholarly journal in econometrics.
The U.S. financial crisis of 2008 has brought into relief the existence of fundamental frictions in financial intermediation and capital markets in rich countries. What can we learn about these recent phenomena that would be useful for economies like Peru? A growing body of finance and economics research is starting to bridge the gap between the well-known practices and trends in U.S. or Europe and emerging countries like Peru, Chile, Argentina, Mexico, India and China. This short course will offer new insights to policymakers, analysts and practitioners by reviewing some of the most important discoveries of the last 15 years regarding emerging markets finance, with emphasis both on the econometric methodology and the key lessons for banking and corporate finance.

Gabriel Natividad

Dr. Gabriel Natividad is a Professor of Economics at Universidad de Piura (Lima) and a member of the Lima School of Economics. He received his PhD at UCLA. His finance-related research has been published in the Journal of Finance, the Review of Financial Studies, the Journal of Financial and Quantitative Analysis, and the Review of Corporate Finance Studies. His work also spans the fields of industrial economics and strategy, and has been published in the RAND Journal of Economics, the Journal of Industrial Economics, the Journal of Economics & Management Strategy, Management Science, Organization Science, and Strategy Science.
